

Hybrid surrogate pipeline (Block 1 + Block 2)

Hybrid loss: $L_{\text{PPO}} + \lambda_{\text{temp}} \times (T_{\text{v3}} - T_{\text{v3.5}})^2 + \lambda_{\text{power}} \times (P_{\text{v3}} - P_{\text{v3.5}})^2$

v3.5 is frozen after Stage A/B/C — enters only the disagreement penalty, never the rollout forward pass.
