

Block 3 pre-registered transferability protocol

the manifest (testcases, regimes, hypotheses, threshold) is committed before any non-bestest_air run

two component verdicts: controller-side $m_S^{\text{RL}} \leq \tau_k$ (per testcase) and surrogate-side full Stage A/B/C RMSE gain.

Pre-registration block is bit-identical between the open (1861e48) and close (7ada793) commits; only result appendices are appended.
