

Stage 3 — Targeted sensitivity analysis (NOT formal HPO) three independent axes; each axis chooses a winner numerically

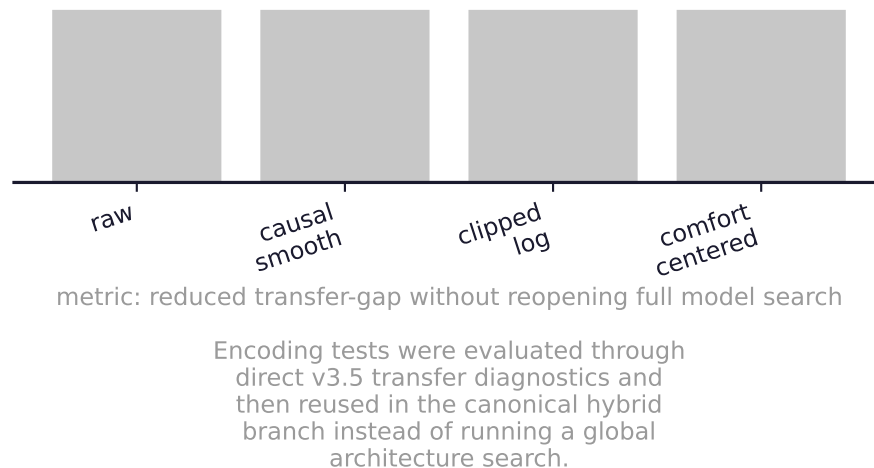

(a) observation ablation

★ WINNER

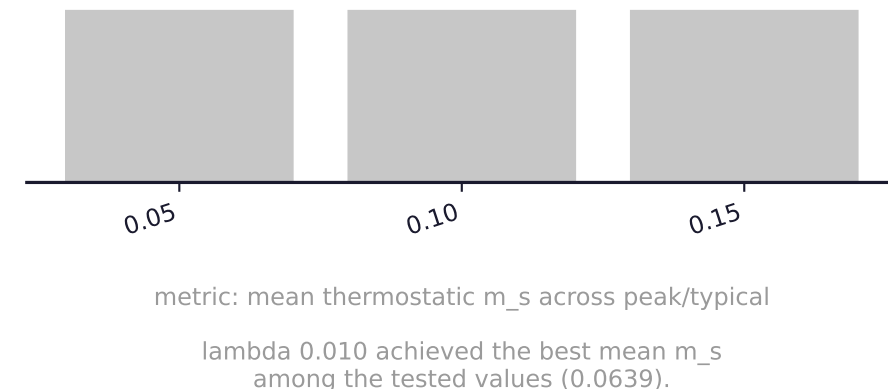

(b) feature encoding

★ WINNER
power=clipped log,
cur=raw,
delta=removed

(c) hybrid lambda temp disagree

★ WINNER
0.010

The paper deliberately frames this as targeted sensitivity, not grid/Bayesian HPO; claim boundary is documented in §6 and Supplementary S10.
